

Omnicutis[®]

Complete skin protection

Omnicutis is a dietetic treatment for the skin to be used in all cases in which is intended a continuous anti-inflammatory response and a prolonged improvement of the animal's life style without secondary effects. Omnicutis achieves this effect because it contains the largest concentration of the most efficient $\Omega 3$ (EPA and DHA) and it is strongly supplemented with the necessary components for a fast recovery from skin diseases.

Composition and activity of Omnicutis (values per 100ml)

1. **Essential fatty acids $\Omega 3$** , but only the most efficient ones: EPA (11,8g) and DHA (7,7g). These are the only ones that contain a pure anti-inflammatory activity. They are especially efficient in controlling situations as atopy, FAD, contact allergies, other pruritic conditions, hot spots and abnormal hair loss.

Pyoderma (hotspot) due to self-inflicted trauma

Food allergy with the typical hitch around the face, eyes and ears

Flea allergy dermatitis

Atopy

Pruritic conditions in general

Skin atrophy with skin alopecia due to prolonged corticoid application

2. Vitamine A (retinol, 30'000 U.I.) for adding-on to the treatment of dermatosis responsive to vitamine A, typical of Cocker Spaniels and Labradors and characterized by occlusive hyperkeratosis of hair follicles and fat seborhea.

General look and skin detail of Vit. A responsive dermatosis

3. Zinc (480mg) for treating dermatosis responsive to Zinc syndrome I (adults typically in Nordic breeds, facial dermatosis and hyperkeratosis, life-long treatment) and syndrome II (fast growing puppies, scaling, temporary treatment).

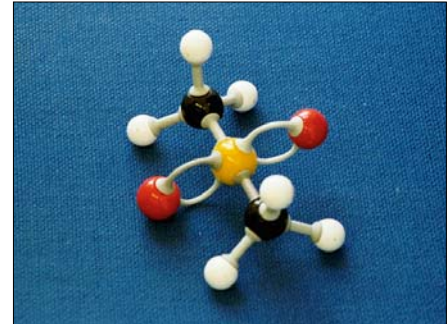

Common aspect of dermatosis responsive to Zn -I (adults)

4. Anti-oxidants: vitamine E (850 U.I.) and vitamine C (300mg). These vitamins contain strong anti-oxidant activity neutralizing super-oxide free radicals which exist in all necrotic and inflammatory processes.

This action limits the damage during the course of the dermatosis and enables a faster recovery from the injuries.

5. Metyl-Sulfonyl-Metano (MSM, 7g). This component is a natural similar of DMSO (it has only an O atom more than DMSO).

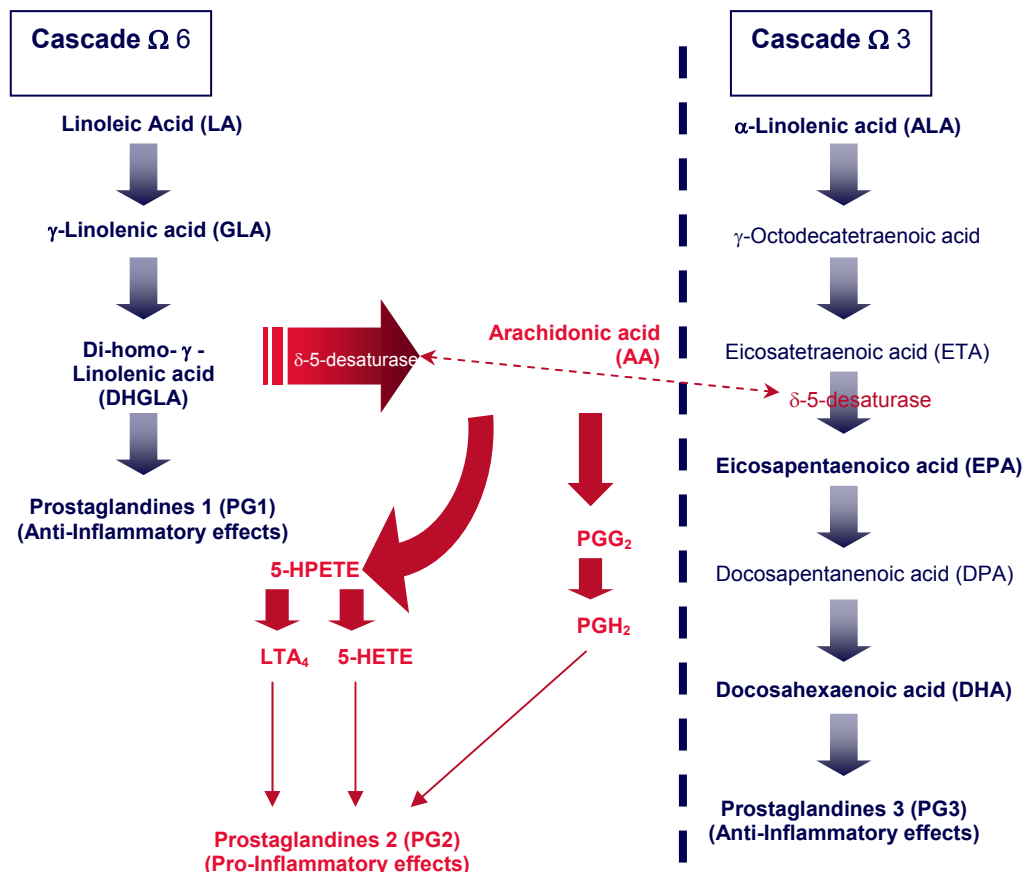

MSM has a leverage effect over all other components in Omnicutis . Moreover, MSM has its own scavenging activity on super-oxide free radicals and toxins.

Yellow = S ; Red = O
Black = C ; White = H

Why $\Omega 3$? Why not $\Omega 6$?

Only $\Omega 3$ have a pure anti-inflammatory effect (therefore anti-allergic). On the contrary $\Omega 6$ produce an ambiguous effect that can only be positive in situations where food is very poor in essential fatty acids. With the use of normal petfood, this situation nowadays is very uncommon as this food already contains (in most cases) sufficient values of $\Omega 6$. In this scenario, $\Omega 3$ becomes the most essential fatty acid, increasing the therapeutic value of its use.

What's Omnicutis posology?

0,3 ml/ kg/ day for cats and dogs

Which means:

< 5 kg	1,5 ml
From 5 to 10 kg	3 ml
From 10 to 20 kg	6 ml
From 20 to 40 kg	12 ml

- Shake before use (the densest elements, Zn e vit. C, rest at the bottom of the bottle)
- Give it with or without a meal
- Give it directly into the animal's mouth or mix it with the food (great palatability)
- Give it for a minimum of 4 to 8 weeks for best results
- Start reducing corticoid and anti-histaminic doses after the 3rd week of Omnicutis administration

Presentation of Omnicutis?

- ✓ 200ml bottle (includes a dosing syringe)
- ✓ Each bottle is sufficient to treat a 20 kg dog for 33 days
- ✓ Its formula is very palatable for cats and dogs. When Omnicutis is added to the animal's regular food, normally food's palatability increases.

What are the main benefits of Omnicutis?

- ✓ Dietetic treatment for the skin with a broad spectrum: allergic processes, dermatosis responsive to Vit. A and Zinc.
- ✓ High concentration of the most efficient essential fatty acids: EPA e DHA
- ✓ Faster recovery due to the high concentration of components and by the potential effect of the carrier MSM
- ✓ Bottle with a sufficient size for a 33 day treatment on a 20kg dog

Omnicutis®

Alimento dietético para las dermatosis o excesiva caída de pelo en perros o gatos con alto contenido en ácidos grasos esenciales Omega-3, vitaminas, anti-oxidantes y zinc

Alimento dietético para as dermatoses ou excessiva perda de pêlo em cães e gatos, com alto teor de ácidos gordos essenciais Omega-3, vitaminas, anti-oxidantes e zinco

Producto equilibrado para perros y gatos
